Robotics
relay team
raises nearly
\$2000 for
charity

ENFORCERS JOIN RELAY 4 LIFE AND RUN A ROBOT DEMO!

Eight team members participated in relay, and committed to staying the night: Niranth, Varun, Enzo, Ian, Andy, Patrick, Ethan, and AJ. Our team was happy to be representing 2 survivors at Relay, Sarah Mangiafico and Russel Scull, as well as their caretakers. Additionally, we volunteered to run a robot demo, using our recently refurbished robot, Stormin' Normin'. As Relay went into the afternoon, many of our students had already racked up 10 miles of walking already. Out of the 8 students who participated, 4 managed to stay awake for all 24 hours. Relay For Life was a major success this year because of the students and coaches who dedicated their time and effort.

Summer Outreach

STEAM DAY

Closing in on the end of the school year, a group of volunteers visited West District, Union School, and East Farms elementary schools to teach kids STEAM concepts. These activities included baking soda and vinegar reactions, mini-bridge building, and coding projects.

Unionville Museum

We participated during the Unionville Museum's "How Things Move" festival by demonstrating how our robots move and why different types of drive bases help us.

FLL Summer Camp

For a week during the summer we hosted a condensed version of a FIRST LEGO League program for kindergarteners and first to fourth graders. We taught them concepts based on the year's theme which was transportation, learning about moving things efficiently and building strong structures.
